IDFC FIRST Bank

Taking Banking FIRST into the future

FAME 6.0

Open Innovation Challenge 2026

FIRST Sight

Problem Statement 1 · Digital property valuation for Loan Against Property

Check the property file before anyone travels

FIRST Sight: LAP Property Checks in 2.6 Days, Not 7

The delay is in paperwork, not visits: we check each file on day one and send a valuer only where risk needs one

THE PROBLEM

5-7 days, ≈₹5,500

per property check today; in IDFC's sample the visit took 1 day and signing 9 more

THE SOLUTION

Check papers first

AI reads each paper on day one, written rules pick 1 of 3 visit lanes, a valuer signs

THE OUTCOME

2.6 days, ≈₹2,860

per check (estimate); ≈₹16.7 Cr a year in savings and interest; payback ≈20 months

HOW ONE LAP FILE MOVES THROUGH FIRST SIGHT

Five S.I.G.H.T. steps run on every file; the Grade step then sends it down one of three lanes, so only risky files get a full visit

LAP file

S — Source
Asked once, on WhatsApp

I — Inspect
Checked vs land records

G — Grade
Rules pick the lane

H — Human
Valuer checks, signs

T — Track
Watch after the loan

- **Sight 24** 35% · 24 h · video
- **Sight 72** 35% · 72 h · short visit
- **Sight Full** 30% · ≤4 days · full visit

Valuer signs
Each lane ends in a valuer's signature and a 1-page card

PROVEN IN TESTS

- **69/69** problems caught
- **31/31** report errors
- **0** false alarms

64 blind test files; < 1 US cent to read a real report

WHAT IDFC GAINS (ESTIMATES)

Cost / check	₹5,500	₹2,860
Days to clear	7 days	2.6 days
Report pages	10-13	1 page

Plus ≈₹7.7 Cr a year of extra interest

THE ASK

1. Approve a 1,000-file shadow pilot in Dehradun and Coimbatore
2. Run Second Sight on every agency report from day one
3. Board approves the lane policy after the pilot gate

Check the property file before anyone travels: faster LAP decisions with every risk control intact

The Delay and the Risk Hide in the Paperwork

Our audit of IDFC's 3 sample reports: the visit takes a day, while papers that disagree surface late and get typed wrong

PRIMARY RESEARCH: IDFC'S 3 SAMPLE REPORTS, FIELD BY FIELD

We read every field of IDFC's three sample appraisals; each finding below cut the value IDFC could lend against, or the trust in the report

01 Dehradun

House · ₹3.19 Cr (land only)

10 days visit to signature

Time: signed 10 days after a 1-day visit
Size: built 15% over the approved plan
Mismatch: 282 sq ft lost to a road widening
Error: plan number and government rate left blank

02 Dehradun

Commercial · ₹20.11 Cr

82% over approved size

Time: visit 12 June, report 13 June
Size: built 82% bigger than approved
Mismatch: plot 5,192 sq ft in deeds, 4,139 on the map
Error: government rate left blank

03 Coimbatore

House · ₹3.40 Cr · 14 years

1 vs 3 survey numbers

Time: two inspection dates, 4 July and 7 August
Size: no approved building plan given
Mismatch: deed shows 1 survey number, the map 3
Error: ₹3.40 Cr written as ₹55.6 lakh in words

WHERE THE DAYS GO: REPORT 1

Dates printed on IDFC's own report

Report 3 is worse: its header, remarks and signature carry three different dates, so the real gap cannot even be measured

Why it matters: LAP is 11% of IDFC's ₹3.47 lakh Cr loans, and mortgages grew only 8.7% a year vs 35.4% for retail (Q2 FY27)

FIVE INSIGHTS, AND WHAT EACH ONE MEANS FOR OUR DESIGN

1 Time is lost after the visit, not at it
So the report is pre-filled before anyone travels

2 Most of the report is desk work
So the system does the look-ups valuers do by hand

3 The real risk is papers that disagree
So every paper is checked against every other

4 Typing creates report errors
So words and maths are generated, never typed

5 Agencies apply different rules
So bank rules (80% quick-sale) apply every time

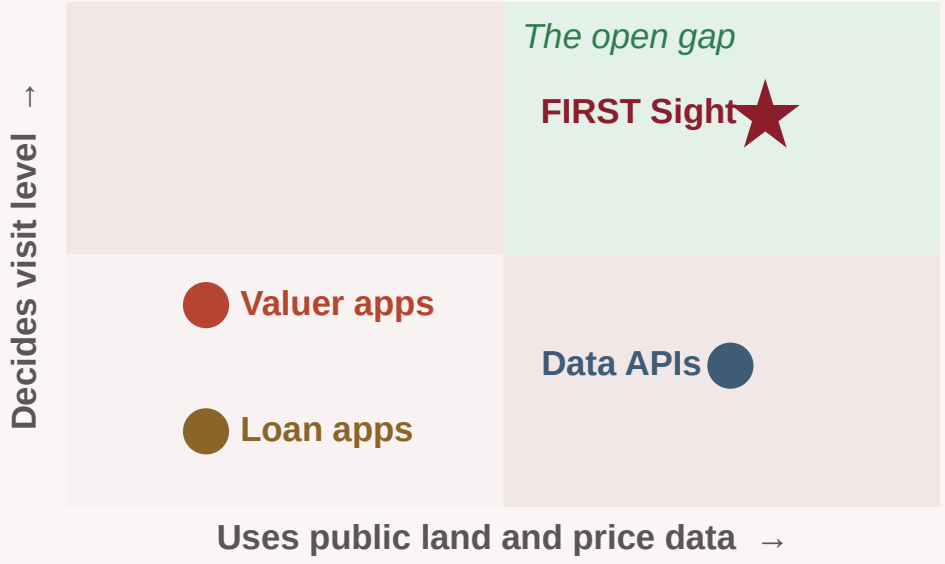

Fix the paperwork, not just the visit: that is where IDFC loses days and takes on avoidable risk

No One Decides How Much Visit a File Needs

Vendors digitise visits or sell data; deciding how much checking each file needs is the open gap IDFC can own first

WHERE EACH PLAYER SITS TODAY

Across: use of public land and price data. Up: deciding how much visit a file needs

WHAT EXISTS TODAY VS FIRST SIGHT

Seven abilities a bank needs to cut visits safely; only FIRST Sight covers all seven

	Valuer apps	Data APIs	Loan apps	FIRST Sight
Reads and cross-checks every paper	●	●	✗	✓
Decides how much visit is needed	✗	✗	✗	✓
Runs a bank-owned live video check	✗	✗	✗	✓
Pre-fills IDFC's own report form	●	✗	✗	✓
Checks every agency's report	✗	✗	✗	✓
Watches the property after the loan	✗	✓	✗	✓
Explains each decision with sources	✗	●	✗	✓

e.g. Valocity (valuer apps), AdvaRisk and Square Yards (data APIs), Finezza (loan apps); amber dot = partly

WHY THE GAP EXISTS

Agencies are paid per visit

Tools built for them make visits faster but never remove one, as that would cut their fee

Data firms sell facts

How much visit a file needs is credit policy that only the bank can set and approve

Land data is newly usable

With records online and served by ULI, a desk check can now replace most travel

IDFC can be first to set site visits by risk, owning the rules while partners supply the data

How FIRST Sight Works: Read, Check, Grade, Sign

AI reads, written rules decide, a qualified valuer signs: the same file always gets the same, explained answer

S.I.G.H.T.: FIVE STEPS EVERY FILE GOES THROUGH

S · Source

Every paper listed on day one; asked once, on WhatsApp

Who: Customer, AI

I · Inspect

Papers checked against each other, land records, maps and sales

Who: System rules

G · Grade

Written rules pick Sight 24, 72 or Full and explain why

Who: System rules

H · Human check

Live video or a visit; then a valuer checks and signs

Who: Officer, valuer

T · Track

1-page Collateral Card; property watched after the loan

Who: Credit, risk

THREE LANES: EACH FILE GETS ONLY THE VISIT ITS RISK NEEDS

Rules pick the lane on day one, and tell the customer what would move the file to a faster lane

Sight 24 — 35%

When: No problems; loan ≤ ₹1 Cr and ≤ 50% of value

What: 30-min live video; signed within 24 hours

Signs: bank valuer · **≈₹1,300**

Sight 72 — 35%

When: 1-2 smaller problems, or a ₹1-5 Cr loan

What: Engineer checks only the flagged items

Signs: panel valuer · **≈₹2,500**

Sight Full — 30%

When: Serious problem, loan > ₹5 Cr or special building

What: Full visit, papers pre-checked; 2 valuers ≥ ₹50 Cr

Signs: panel valuer · **≈₹5,100**

18 PROPERTY CHECKS IN FOUR FAMILIES, EACH NAMING THE TWO PAPERS THAT DISAGREE

Area and building (5)

Plot area, built vs approved, map pin, road widening, floors

Title and approvals (5)

Survey nos., owner names, plans, CERSAI loans

Value (4)

Price vs nearby sales and govt rate, LTV, value change

Risk and life (4)

Recent sale, flood area, building life, papers

AI only reads; plain rules make every decision; a qualified valuer signs every case, so nothing is a black box

Report 3 Replayed: All Problems Found on Day One

Run through our live prototype, IDFC's Coimbatore case shows the valuer's findings on day one and fixes 2 report errors

How to read this slide: we replayed IDFC's real Report 3 (Coimbatore house, ₹3.40 Cr) in our working prototype. The three panels follow the file through S.I.G.H.T. steps I (Inspect), G (Grade) and H (Human check); the table below compares the result with the report IDFC actually received.

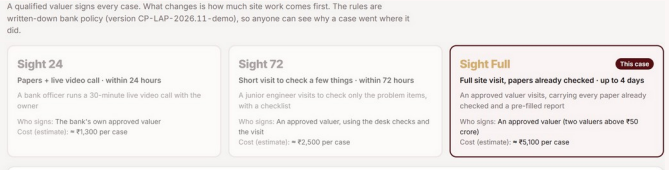

I · INSPECT: DEED VS LAND MAP

The deed lists one survey number, 173A/1F. The FMB sketch and TNGIS map put the building over three, so rule R02 flags a serious problem

G · GRADE: LANE AND SCORE

One serious problem sends the file to Sight Full; the customer is asked for a rectification deed on day one

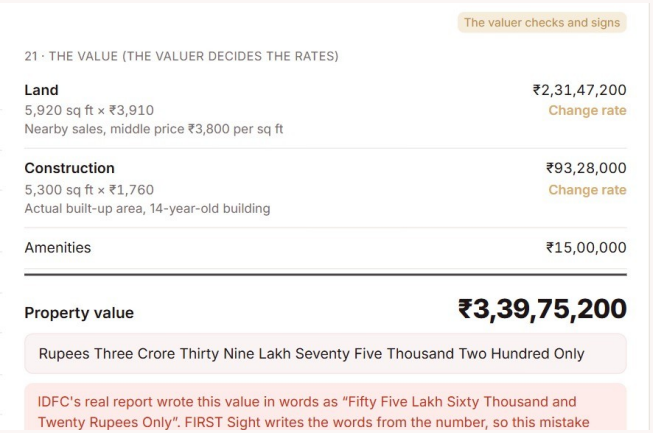

Sight Score 55

= 100 − 22 serious − 14 for 2 smaller − 8 missing papers − 1 price gap

Each lost point names its problem

H · VALUER CO-PILOT SIGNS

The valuer sets land ₹3,910 and building ₹1,760 per sq ft; the system writes the words and applies the 80% rule

TODAY VS FIRST SIGHT, AND HOW EACH FIX IS DONE

Issue	IDFC's report today	FIRST Sight	How it is done
Survey mismatch	Noted weeks after the visit	Flagged on day 0	Deed vs map, rule R02
Value in words	₹3.40 Cr written as ₹55.6 lakh	Correct words	Built from the figure
Quick-sale value	85%: ₹17 lakh too high	Bank's 80% rule	Policy % applied by code
Visit dates	Two dates: 4 Jul and 7 Aug	Blocks sign-off	Second Sight date check

The problems IDFC's valuer found weeks later surface on day one, and the typing errors can no longer happen

People Stay in Charge; the Tool Does the Typing

Each role keeps its decisions while the system removes typing, chasing and look-ups, so it feels like help, not control

SIX ROLES AROUND ONE PROPERTY FILE

Each card shows what the role does today, what changes, and the decision it still owns; the centre is the single file everyone now shares

Customer

Today: re-sends papers often

Now: asked once, on WhatsApp

Decides: when the video happens

Valuer

Today: types 10-13 pages

Now: checks a pre-filled form

Decides: every rate, the signature

Risk team

Today: samples reports later

Now: sees each lane's reason

Decides: rules, lane go-live

THE PROPERTY FILE

Sales RM

Today: chases papers, agencies

Now: sees gaps on day one

Decides: date promised to client

Credit officer

Today: reads long PDF reports

Now: reads a 1-page card

Decides: the credit decision

Valuation agency

Today: paid per visit, any case

Now: per-lane fee, speed bonus

Decides: which complex cases

ADOPTION PATH IN FOUR STEPS

1. Second Sight checks agency reports first; nobody's job changes
2. Shadow mode: the system suggests, people still decide
3. Pilot champions in two cities coach their peers
4. Each lane goes live only after its risk gate is passed

NO HUMAN BOTTLENECK

- Each lane has an SLA clock and a named owner
- Unsure AI readings go to a person, source shown
- Any flag can be overridden with a written reason
- A guided in-app tour trains users in minutes

FIRST Sight is a co-pilot: it removes typing and chasing, while every judgement stays with a named person

A Shadow Pilot Proves Safety Before Scale

1,000 files run side by side in 2 cities; lanes go live only after each gate, and the build pays back in about 20 months

ROLLOUT OVER 24 MONTHS: FIVE PHASES, EACH ENDING IN A GATE

0 Discover Months 0-2	1 Build Months 3-5	2 Shadow pilot Months 6-8	3 Live pilot Months 9-12	4 Scale Months 13-24
Study 12 months of IDFC files; draft lane policy; legal opinion	Connect land records; train AI on past reports; reuse video-KYC	1,000 files run both ways in Dehradun and Coimbatore	Sight 72 and Full live; Sight 24 up to ₹50 lakh	All states; Sight 24 up to ₹1 Cr; home loans; alerts
Board approves lanes, shadow only	**Security audit, AI check passed**	**60%+ auto-filled, 0 serious misses**	**Errors, defaults no worse than today**	**Quarterly risk-committee review**

HOW THE SHADOW PILOT WORKS

Today's process keeps deciding while FIRST Sight only recommends, so no customer bears any new risk

1. 1,000 LAP files in Dehradun and Coimbatore, the cities in IDFC's sample reports
2. Each file runs both ways; a control group sets today's baseline
3. Measure fields auto-filled, problems caught, value gaps and days
4. From day one, Second Sight checks every agency report

BUSINESS CASE (ESTIMATES)

Cost / check	₹5,500	₹2,860 (−48%)
Days to clear	7 days	2.6 days

₹9.0 Cr	₹7.7 Cr	₹8 Cr	20 mo
saved a year	extra interest	one-time build	payback

Assumes 34,200 checks a year, ₹4,000 agency fee plus ₹1,500 staff time today, lane mix 35/35/30, 3.5% interest margin

Not counted: home loans on the same system, fraud caught, alerts after the loan

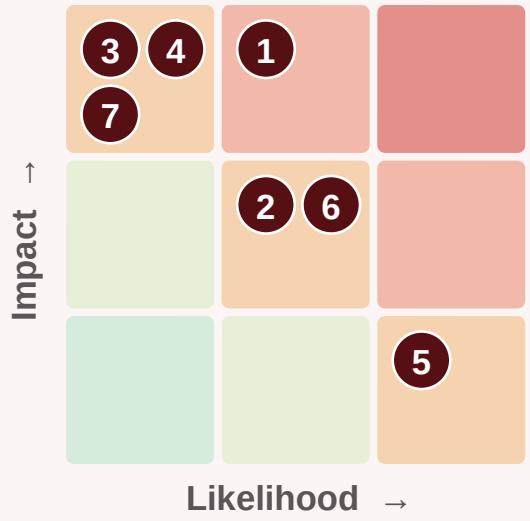

Nothing changes for customers or credit until the pilot proves the fast lanes are as safe as today

Every Risk Has an Owner and a Stop Rule

Seven risks mapped by likelihood and impact, each with a control and an owner; the fast lane pauses itself if risk rises

RISK HEAT MAP

Each numbered risk is placed by likelihood and impact before controls

RISK REGISTER: CONTROL AND OWNER FOR EACH RISK

Risk	How we control it	Owner
1 Owner shows a different house on video	Starts only within 30 m; random prompts; GPS-time stamps; meter vs bill	**Technical services**
2 AI misreads a deed or plan	Values quote their exact words; unsure readings go to a person	**Model risk team**
3 A fast-lane loan goes bad	Sight 24 capped at 50% of value; defaults tracked against a control group	**Chief Risk Officer**
4 Regulator questions the lanes	Valuer signs every case; Board-approved policy; video-KYC style controls	**Compliance**
5 Land data missing or portal down	Missing data sends the file to a slower lane as a manual task	**Operations**
6 Valuers and agencies push back	Per-lane fee with a speed bonus; agencies keep complex, higher-value work	**Head of Mortgages**
7 Customer data misused	Consent at upload; data kept in India; names hidden; limited retention (DPDP)	**Data Protection Officer**

WHO RUNS IT: ONE SPONSOR, CLEAR OWNERS

Sponsor
Head of Mortgages: business case

→

Steering group
CRO, CTO, Compliance, Ops

→

Day-to-day owners
Credit Policy, Model Risk, Tech, Audit

Stop rule: the fast lane pauses itself if defaults or value gaps exceed the control group

Clear owners, one sponsor and automatic stop rules keep the programme safe from pilot to scale
