FAME #FirstAmongEquals

IDFC FIRST Bank

Taking Banking FIRST into the future

FAME 6.0

Open Innovation Challenge 2026

FIRST Sight

Problem Statement 1 · Digital property valuation for Loan Against Property

Check the property file before anyone travels

Executive Summary

Delays come from paperwork, not visits: FIRST Sight checks each file first and visits only where needed

THE PROBLEM

5-7 days, ≈₹5,500

per check today; IDFC's own reports show papers, not visits, cause the delay

THE SOLUTION

S.I.G.H.T. + 3 lanes

AI reads papers on day one, rules pick the visit level, a qualified valuer signs

THE OUTCOME

2.6 days, ≈₹2,860

per check (estimate); ≈₹16.7 Cr a year gained; payback in about 20 months

HOW IT WORKS: FIVE STEPS, S.I.G.H.T.

S Source	I Inspect	G Grade	H Human	T Track
All papers asked once, on day one	Papers checked vs land records	Rules pick the visit lane	Video or visit; valuer signs	One-page card, then ongoing watch

ALREADY PROVEN (MEASURED)

69 / 69 problems caught	**31 / 31** report errors caught
0 false alarms	**< 1 US cent** AI cost per report

THE ASK

Approve a 1,000-case shadow pilot in Dehradun and Coimbatore; run Second Sight on agency reports from day one

WHY IT IS SAFE

- A valuer signs every case
- 1 in 10 fast cases fully visited
- Shadow mode before go-live

Check the property file before anyone travels: faster LAP decisions with no risk control loosened

The Problem, in IDFC's Own Reports

IDFC's three sample appraisals show delay and risk come from papers that disagree, found too late

WHAT IDFC'S 3 SAMPLE REPORTS REVEAL

Report 1 · Dehradun · ₹3.19 Cr
House signed 10 days after a one-day visit; built 15% over the approved plan

10 days to signature

Report 2 · Dehradun · ₹20.11 Cr
Commercial block 82% larger than approved; plot 5,192 sq ft in deeds, 4,139 on map

82% over approval

Report 3 · Coimbatore · ₹3.40 Cr
House deed lists 1 survey number, the land map shows 3; value in words is wrong

1 vs 3 survey nos.

WHERE THE TIME GOES: REPORT 1

25 May · visit — 26 May · draft — 4 Jun · signed

Visit: one day. Writing, checking and signing: nine more

SECONDARY RESEARCH

- RBI 2025 Directions ask for a Board policy and a qualified valuer; no rule needs a visit per case
- LAP is 11% of IDFC's ₹3.47 lakh Cr book; mortgages grew 8.7% vs 35.4% for retail (Q2 FY27)
- 99.9% of India's land records are computerised; RBI's ULI serves land records from 8 states

FIVE INSIGHTS THAT SHAPE THE SOLUTION

1. Days are lost after the visit, not at it
2. Most of the report is desk work
3. The real risk is papers that disagree
4. Typing creates errors, like value in words
5. Agencies apply different rules: 80% vs 85%

Fix the paperwork, not just the visit: that is where IDFC's days and risks actually sit

The Gap No One Fills Today

Vendors digitise the visit or sell data; no one decides how much visit each case actually needs

WHAT EXISTS TODAY VS FIRST SIGHT

	Valuer apps	Data APIs	Loan apps	FIRST Sight
Reads and cross-checks papers	●	●	✗	✓
Decides how much visit is needed	✗	✗	✗	✓
Bank-run live video inspection	✗	✗	✗	✓
Pre-fills IDFC's report form	●	✗	✗	✓
Checks every agency report	✗	✗	✗	✓
Watches property after the loan	✗	✓	✗	✓

e.g. Valocity; AdvaRisk, Square Yards; Finezza · amber dot = partly

WHY THE GAP EXISTS

Agencies earn per visit
so their tools digitise visits, never remove them

Data firms stop at data
the visit decision is bank policy only IDFC can set

Land data is newly usable
records online and ULI live, so the desk check works

FIRST MOVER, AND HOW IDFC STAYS AHEAD

- Lane rules become IDFC's own policy
- Agency report card from day one
- Data vendors plug in as partners
- Every case enriches the Passport

HOW WE EXECUTE IT

- Build rules, lanes, Collateral Card
- Partner for land data via ULI
- Reuse IDFC's video-KYC set-up
- Start: Second Sight needs no IT link

IDFC can be first to set visits by risk, owning the rules while partners supply the data

FIRST Sight: How It Works

Five steps check every file on day one; written rules then send each case down the lightest safe lane

S.I.G.H.T.: FIVE STEPS FROM PAPERS TO SIGN-OFF

S · Source
Every paper listed on day one; customer asked once, on WhatsApp

I · Inspect
Papers checked against each other, land records, maps and sale prices

G · Grade
Written bank rules pick Sight 24, 72 or Full and explain why

H · Human check
Live video or a visit, then a valuer signs a pre-filled report

T · Track
One-page Collateral Card; property watched after the loan

THREE LANES: VISIT ONLY AS MUCH AS RISK NEEDS

Sight 24	Clean file, loan up to ₹1 Cr and 50% of value: 30-minute live video	35% · ≈₹1,300
Sight 72	1-2 minor issues or a ₹1-5 Cr loan: short visit for those items only	35% · ≈₹2,500
Sight Full	Serious issue, over ₹5 Cr or special property: full visit, papers pre-checked	30% · ≈₹5,100

Lane share and cost are estimates. 1 in 10 Sight 24 cases also gets a full visit, so the fast lane is proven safe

THE GOLDEN RULE

AI reads
Turns each paper into facts, quoting the exact words

Rules decide
18 checks, lane, value maths and Sight Score, in plain code

A valuer signs
Sets the rates, explains any change, signs every case

AI reads, rules decide, a qualified valuer signs: speed comes from checking papers first, not cutting checks

Worked Example: IDFC's Report 3

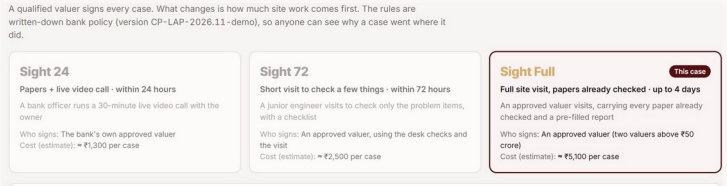

In our working prototype, the Coimbatore file shows every problem on day one, not weeks after the visit

1 · DAY 0: MISMATCH FOUND

Real property; 30 m video-inspection ring

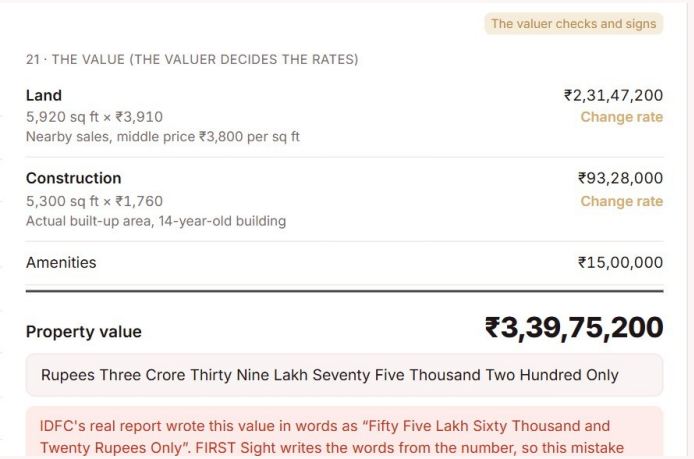

2 · SAME DAY: LANE CHOSEN

Sight Full, as one serious problem exists; the rectification deed is requested on day one

Live at first-sight-fame.vercel.app; land-record and CERSAI links are simulated

3 · VALUER SIGNS

Words generated from the number

TODAY VS WITH FIRST SIGHT

	Today	With FIRST Sight
Survey mismatch	Seen only in the final report	Flagged on day 0
Value in words	₹3.40 Cr written as ₹55.6 lakh	Written from the number
Quick-sale value	85%, overstating by ₹17 lakh	Bank's 80% rule applied

PROOF IT WORKS (MEASURED)

69 / 69 issues caught	**31 / 31** report errors	**0** false alarms
42-160 s per report	**< 1** US cent each	**31** tests passing

The problems IDFC's valuer found late are caught on day one, and the report mistakes cannot happen

People Stay in Control

The tool drafts and flags while people make every call, and each role gains time and visibility

EVERY ROLE GAINS, NO ROLE LOSES CONTROL

Customer
Asked once on WhatsApp; a 30-minute video, not a wait

Controls: When and how the inspection happens

Sales RM
Sees missing papers and the lane on day one

Controls: The customer promise and date

Valuer
Checks a pre-filled form instead of typing 13 pages

Controls: Every rate, override and signature

Credit officer
Reads a one-page Collateral Card with sources

Controls: The credit decision, as today

Risk team
Sees why each lane was chosen; audits 1 in 10

Controls: The rules, and when lanes switch on

Valuation agency
Keeps complex work; paid per lane, speed bonus

Controls: Its own panel performance score

ADOPTION IN FOUR STEPS

- Second Sight checks agency reports; no job changes
- Shadow mode: the system suggests, people decide
- Pilot champions in two cities train their peers
- Lanes switch on only after the risk gate is passed

NO HUMAN BOTTLENECK

- Each lane has an SLA clock and a named owner
- Unsure AI readings go to a person, with the source shown
- Any flag can be overridden with a written reason

FIRST Sight is a co-pilot: it removes typing and chasing, while every judgement stays with a named person

Pilot First, Then Scale

A 1,000-case shadow pilot proves safety before any visit is cut; the build pays back in about 20 months

ROLLOUT IN FIVE PHASES, EACH WITH A GATE

0 Discover Months 0-2	1 Build Months 3-5	2 Shadow pilot Months 6-8	3 Live pilot Months 9-12	4 Scale Months 13-24
Board approves lanes, shadow mode only	Security audit and AI check passed	60%+ fields auto-filled, zero serious misses	Value errors and defaults no worse than today	Quarterly risk-committee review

HOW THE SHADOW PILOT WORKS

1. 1,000 LAP cases in Dehradun and Coimbatore, the cities in IDFC's sample reports
2. Both run side by side: today's process decides, FIRST Sight only recommends
3. Measure fields auto-filled, problems caught, value gaps and days to clear
4. Quick win on day one: Second Sight checks every agency report, no integration

BUSINESS CASE (ESTIMATES)

Cost per check	Today: ₹5,500	**₹2,860** with FIRST Sight
Days to clear	Today: 7 days	**2.6 days** with FIRST Sight

₹9.0 Cr	₹7.7 Cr	₹8 Cr	≈20 mo
saving a year	extra interest	to build	payback

Assumes 34,200 checks a year, lane mix 35/35/30; at 20% Sight 24, savings still top ₹7 Cr

Nothing changes for customers or credit until the pilot proves the fast lanes are as safe as today

Risks, Owners and Governance

Every risk has a named owner and a stop rule, and the Head of Mortgages sponsors the programme

RISK REGISTER

Risk	Level	How we control it	Owner
Owner shows a different house on video	High	Geofence, random prompts, GPS stamps, meter vs bill, 1-in-10 visits	Technical services
AI misreads a deed or plan	Medium	Exact-words proof; unsure readings go to a person; rules decide	Model risk team
A fast-lane loan goes bad	Medium	Sight 24 capped at 50% of value; defaults tracked vs a control group	Chief Risk Officer
Regulator questions the lanes	Medium	Valuer signs every case; Board-approved policy; video-KYC rules	Compliance
Land data missing or a portal down	Low	Missing data moves the case to a slower lane; nothing is guessed	Operations
Valuers and agencies resist	Medium	Per-lane pay, speed bonus; agencies keep complex, high-value work	Head of Mortgages
Customer data misused	Low	Consent at upload, India-only data, names hidden, short retention	Data Protection Officer

Stop rule: the fast lane pauses if defaults or value gaps exceed the control group

WHO RUNS IT

Sponsor
Head of Mortgages: business case, adoption

Steering committee
CRO, CTO, Compliance, Ops; approves gates

Day-to-day owners
- Credit Policy: rules, lanes
- Model Risk: AI checks
- Tech services: video, valuers
- CISO: security
- DPO: privacy
- Audit: 1-in-10 visits

Clear owners, one sponsor and automatic stop rules keep the programme safe from pilot to scale
